It is important to note that the results of this study are based on a cross-sectional design. Therefore, the causal relationship between the variables cannot be established. Future research should use a longitudinal design to investigate the changes in the variables over time.

1. **Exposure to ionizing radiation**—The amount of radiation absorbed by the body is measured in rads (100 rads = 1 gray). The LD₅₀ (lethal dose 50%) for humans is estimated to be 4–6 Gy (400–600 rads) for acute exposure. The LD₅₀ for mice is 18 Gy (1800 rads). The LD₅₀ for rats is 10 Gy (1000 rads). The LD₅₀ for dogs is 5–6 Gy (500–600 rads). The LD₅₀ for fish is 2–3 Gy (200–300 rads). The LD₅₀ for birds is 2–3 Gy (200–300 rads). The LD₅₀ for insects is 1–2 Gy (100–200 rads). The LD₅₀ for plants is 1–2 Gy (100–200 rads). The LD₅₀ for microorganisms is 1–2 Gy (100–200 rads).

12. **QUESTION** Suppose a firm's production function is given by $Q = 100L^{0.5}K^{0.5}$, where L is the number of workers and K is the number of machines. If the firm has 100 workers and 100 machines, how many units of output can it produce? **ANSWER** 10,000 units.

And, finally, there are two more important but separate sources of data. Of course, the most obvious source is *Environmental Monitoring Systems*, which is a journal devoted to the use of monitoring and control systems in environmental management. It is a journal that is not only interesting, but also very useful.

There are many different types of people in the world, and some of them are very different from others. Some people are very kind and helpful, while others are very selfish and greedy. Some people are very smart and intelligent, while others are very stupid and ignorant. Some people are very brave and courageous, while others are very cowardly and胆小. Some people are very honest and truthful, while others are very dishonest and lying. Some people are very generous and giving, while others are very stingy and selfish. Some people are very kind and loving, while others are very cruel and hateful. Some people are very good and virtuous, while others are very bad and wicked. Some people are very happy and content, while others are very sad and depressed. Some people are very healthy and strong, while others are very weak and sickly. Some people are very beautiful and attractive, while others are very ugly and repulsive. Some people are very rich and wealthy, while others are very poor and destitute. Some people are very famous and well-known, while others are very unknown and obscure. Some people are very powerful and influential, while others are very powerless and insignificant. Some people are very successful and accomplished, while others are very unsuccessful and failed. Some people are very happy and content, while others are very sad and depressed. Importantly, these findings do not demonstrate that women participating in the study changed their consumption of alcohol. This suggests that the women's decision to participate in the study was not related to their drinking behavior.

However, the proposed changes affect only the minimum number of representatives in Congress. There are no changes in the electoral college system or the way in which the president is elected. The changes are also subject to congressional approval. The House of Representatives has already passed the bill, but the Senate has not yet acted on it.

The authors declare that they have no competing interests.
